Why CheckPoint Secure?

So you have a "security company" providing patrol services to protect your property and assets. But how do you really know that they are checking all entrances, exits, gates, and areas of interest? Is it enough that they leave a calling card at the entrance to say they visited?

The reality is that you are paying security guards to patrol and protect an area. Without checkpoint monitoring systems in place, you don't know if, or how many times a security guard has patrolled each part of the area. You also don't know if they have checked in to start the shift and then left the area to eat, sleep or attend another job.

CheckPoint Secure ensures security guards visually check each point of interest by having them scan a QR Code or NFC tag positioned in the area.

CheckPoint Secure provides details such as the date and time of the scan, the geolocation / GPS position, IP address, time taken between each point of interest, and the ability to see directly on a map where each scan took place.

Scheduled daily and weekly reports are automatically sent to people who need to know and a portal is available to filter and export additional reports.

Why CheckPoint Secure?

We didn't stop there, Security Guards are able to reliably scan QR Codes and NFC Tags via our Android and iOS App.

We offer incident reporting features where security guards are able to record an incident while on patrol and attach photos as evidence.

Our route technology, if enabled can also advise if a checkpoint was missed in a scheduled round.

CheckPoint Secure is Cloud software, so the hard work is handled for you. All data is encrypted in transit and at rest.

What's more.. it's an industry hardened product that was originally developed for the NSW Government and has been used 24/7 for 1.5 years before being made available to private companies.

Features summary

We are releasing new features all the time.

- Supports scanning of QR Codes and NFC Tags
- Captures geolocation data via GPS
- Date time stamp of scans with the time taken between each scan
- Checkpoint compliance with route technology
- Auto generates QR Codes ready for printing
- Highly reliable with a 99.9999% uptime
- Data encrypted in transit and at rest
- Each customer has their own database
- Interval backups and daily backups of database and software
- Cloud-based software
- CheckPoint App supports Android and iOS devices
- CheckPoint admin portal supports all notebooks and desktops
- Incident reports and End of Shift report auto generated
- Manual run of reports in admin portal, including ability to export data as CSV

Pricing

We've kept pricing of CheckPoint Secure affordable and easy to understand. Pricing is AUD $50 per site per month with up to 100 checkpoints per site and AUD $70 per site per month with up to 2000 checkpoints per site.

QR Code printing and NFC Tags are not included in pricing and are a one off setup cost for the site.

STANDARD LICENSE

- per site license
